

[CLASSIFIED - TOP SECRET//SCI//NOFORN//SOCCENT-J2] Israel: Large scale Air and Cyber
Offensive against Iranian Nuclear Infrastructure 25-26 February 2025

REPORT TITLE:

(S//REL TO USA, FVEY) Israel: Large scale Air and Cyber Offensive against Iranian Nuclear Infrastructure, 25-26 February 2025.

Date: 26 February, 2025

REPORT SUMMARY:

(TS//TKI/RSEN//REL TO USA, FVEY) As of 26 February 2025, intelligence confirms that Israel is finalizing plans for a multi-faceted preemptive strike against Iran's nuclear infrastructure, set to take place as early as the first week of March 2025. The strike will involve coordinated air operations and cyberwarfare, aimed at crippling Iran's nuclear development capabilities. Alongside these operations, Mossad sleeper agents will carry out sabotage operations inside Iran, further degrading its nuclear infrastructure.

Key Operation Details:

(TS//FGI ISR//NF)

1. **Aerial Assault:** Satellite imagery analysis, SIGINT reports, and reconnaissance data indicate a high likelihood that the IAF will deploy a combination of F-35I Adir stealth fighters and F-15I Ra'am strike aircraft, equipped with GBU-72 bunker-buster munitions, as well as a new, more powerful precision-guided munition developed for strategic strikes on hardened nuclear facilities.
2. **Cyber Offensive:** Execution of cyber operations by The Israeli unit 8200 targeting Iranian air-defense radar systems, military communications, and early-warning systems to delay Iran's response and cripple its defensive capabilities. Unit 8200 is expected to employ a range of advanced cyber warfare techniques, including Leveraging electronic jamming to distort and disable radar signals, rendering air-defense systems ineffective. Israel is also deploying sophisticated, long-term infiltration methods to maintain stealth access to Iranian networks and gather intelligence while preparing for coordinated disruption.
